

Technical Proposal

BNI SUMMON OS - Enterprise AI-Native BFSI CRM & Lending Operating System

DISCLAIMER PROPERTY RIGHTS:

Contents of this document is entirely produced for SUMMON client engagement. Each party agrees that it shall not use for any purpose or disclose to any third party any confidential information of the other party without the express written consent of the other party. Each party shall permit access to the confidential Information of the other party only to those individuals (a) who have entered into a written non-disclosure agreement with the other party on terms equally as restrictive as those set forth herein, and (b) who require access in performance of their duties to the other party in connection with the other party's rights under this Agreement.

Each party acknowledges that the wrongful use or disclosure of confidential information of the other party may result in irreparable harm for which there will be no adequate remedy at law. In the event of a breach by the other party or any of its officers, employees, or agents of its or their obligations under this agreement, the non-breaching party may immediately terminate this agreement without liability to the other party, and may bring an appropriate legal action to enjoin such breach, and shall be entitled to recover from the breaching party reasonable legal fees and cost in addition to other appropriate relief.

Our Background Story

On Becoming Pride of The Nation

It all began with a simple yet audacious dream to make a mark on the world stage by showcasing Indonesia potential in technology and artificial intelligence.

The founders of SUMMON were no strangers to challenges; they thrived under pressure and saw every competition as an opportunity to learn, grow, and push boundaries. Their first step into the limelight came when they participated in local business competitions and hackathons. What started as small victories quickly snowballed into something much bigger.

With over **100+ wins** across national and international competitions, Each win brought them closer to their ultimate goal: representing Indonesia on the global stage.

With years of experience, the founders decided it was time to channel their skills and vision into something greater. Thus, SUMMON was born—an AI agency dedicated to transforming ideas into impactful solutions. Leveraging their deep understanding of technology and their proven ability to execute, they set out to help businesses harness the power of artificial intelligence.

Our Values

Our origins and aspirations

01

Relentless Innovation

"We don't just follow trends; we create them."

In the fast-evolving world of artificial intelligence, staying ahead requires constant curiosity and bold experimentation. This value ensures that SUMMON remains a leader in delivering cutting-edge solutions.

02

Unwavering Excellence

"We strive for perfection, even when no one is watching."

Clients partner with SUMMON because they trust us to deliver high-quality outcomes consistently. This value reinforces our reputation as a reliable and elite provider of AI solutions.

03

Empowering Communities

"Our success is measured by the impact we leave behind."

Technology should be a force for good. By empowering businesses, individuals, and society at large, SUMMON can create lasting value beyond profit margins.

At SUMMON, we've built our legacy on our core values, that have guided us from our earliest days. But this journey isn't just ours—it's one we invite you to be part of. When you partner with SUMMON, you're not simply investing in technology; you're aligning yourself with a team that sees challenges as opportunities, strives for perfection in every detail, and believes in the transformative power of collaboration.

Together, we'll push boundaries, unlock new possibilities, and create solutions that don't just drive growth but also leave a meaningful impact on the world. The future is waiting to be shaped—and with SUMMON by your side, there's no limit to what we can achieve. Let's turn your vision into reality. Are you ready to take the leap?

Our Services

About Our Services

AI Development

We create AI that automate tasks, predict trends, and solve problems—helping your business grow smarter and faster.

AI Agent

Access Control System

Executive Summary

PT Bank Negara Indonesia (Persero) Tbk (BNI) requires a comprehensive, AI-native CRM and Lending Operating System to modernize its customer relationship management, loan origination, and portfolio monitoring workflows. Current banking operations across branches involve fragmented systems for lead management, credit analysis, loan processing, and collections, resulting in operational inefficiencies, slower turnaround times, and limited visibility into customer lifecycle and portfolio risk.

PT Summon Cipta Inovasi (Summon) is pleased to submit this technical proposal to design and develop SUMMON OS, an enterprise-grade AI-native BFSI CRM and Lending Operating System. Inspired by platforms such as BUSINESSNEXT/CRMNEXT and Salesforce Financial Services Cloud, SUMMON OS consolidates 26 integrated modules covering executive dashboards, CRM with AI lead scoring, unified Customer 360 profiles, a complete 8-step Loan Origination System (LOS), no-code workflow engine with AI agent nodes, credit analysis with AI memo generation, 10 specialized AI agents, document management with OCR, omnichannel communication, collections management, portfolio monitoring, reporting and BI, and comprehensive administration and access control capabilities.

The development timeline for SUMMON OS covers 2 months of concentrated feature development, commencing after the completion of requirement gathering. The platform will be delivered by a full-stack development team working in parallel across all modules, with each module built to production-ready standards. SUMMON OS will serve as BNI's unified digital backbone for relationship management and lending operations, enabling relationship managers, credit analysts, and executives to operate from a single, intelligent platform with AI-powered insights at every touchpoint.

Objectives / Value Proposition:

No	Objectives	Details
1	Unified Customer Relationship Management	Consolidate all customer interactions, lead management, and relationship tracking into a single AI-powered CRM platform. Enable relationship managers to manage leads through a 9-stage pipeline with AI lead scoring, automated assignment, and omnichannel communication from one unified workspace.
2	End-to-End Loan Origination Automation	Digitize the complete 8-step loan origination flow from application intake through disbursement and post-disbursement monitoring. Automate document collection with OCR, credit analysis with AI-generated memos, committee approvals with e-signatures, and disbursement processing to reduce turnaround time.
3	AI-Powered Decision Intelligence	Deploy 10 specialized AI agents covering credit analysis, document processing, customer insights, collection strategy, compliance checking, and conversational assistance. Integrate AI throughout the platform for lead scoring, risk assessment, anomaly detection, and proactive portfolio alerts.
4	Real-Time Portfolio Monitoring & Risk Management	Provide executive dashboards with real-time KPIs, portfolio heatmaps, NPL tracking, concentration risk analysis, and early warning systems. Enable covenant monitoring with automated breach detection and collection management with AI-prioritized workflows.
5	Operational Excellence & Compliance	Implement configurable workflow engines, rules engines, SLA management, and multi-level committee approval systems. Ensure full audit trail compliance, role-based access control across 9 standard roles, and regulatory reporting capabilities aligned with Indonesian banking requirements.

Client Request Details

Below is a summary of the proposed features for BNI:

No	Feature	Description	Complexity	Mandays
1	Executive Dashboard	Real-time dashboard with 14+ KPI widgets, AI insights, portfolio heatmap, risk alerts, and exportable views.	High	2
2	CRM & Lead Management	Lead pipeline (table/Kanban), AI lead scoring, omnichannel capture, auto-assignment, opportunity tracking, and contact management.	Super High	3
3	Customer 360	Unified customer profile with relationship graph, AI summary, financing history, and KYC status.	Super High	2
4	Loan Origination System (LOS)	End-to-end 8-step flow: intake, documents, credit analysis, collateral, approval, legal, disbursement, post-disbursement.	Super High	3
5	Workflow & Rules Engine	No-code drag-and-drop workflow builder with SLA timers and AI agent nodes; visual IF-THEN rule builder with decision trees.	Super High	4
6	Credit Analysis	Financial spreading, ratio analysis, industry benchmarking, scenario simulation, and AI credit memo generation.	Super High	2
7	AI Agent Center	Hub of 10 specialized AI agents with chat interface, context-aware memory, and workflow integration.	Super High	2
8	Document Management	OCR extraction, AI classification, version control, expiry tracking, watermarking, and secure sharing.	High	2
9	Omnichannel Communication	Unified inbox for WhatsApp, email, SMS with AI-suggested replies and conversation routing.	High	1
10	Collections & Portfolio Monitoring	Aging buckets, PTP management, AI-prioritized queues, early warning system, covenant breach detection, and portfolio heatmap.	High	3
11	Reporting & Business Intelligence	Custom report builder, KPI monitoring, scheduled reports, regulatory templates (OJK/BI), and data export.	High	2

No	Feature	Description	Complexity	Mandays
12	Administration, RBAC & Audit	User/branch/product configuration; 9-role permission system with branch isolation, and immutable audit logging.	High	3
13	API & Integration Center	API gateway, webhook hub, OAuth 2.0, integration marketplace, and API documentation portal.	High	2
14	Task, SLA & Notification	Task assignment with SLA timers and escalation chains; multi-channel notifications with preferences and batching.	High	2
15	Product Config & Committee Approval	Loan product catalog with interest tiers and fee structure; multi-level committee voting with e-signature.	High	2
16	Covenant & Partner Management	Automated covenant testing with breach detection; vendor onboarding, SLA tracking, and performance scoring.	High	2
17	Customer Portal & Mobile RM	Self-service portal with AI chatbot; mobile RM workspace with GPS capture, visit logging, and offline mode.	High	3
Total			40 Mandays	

Scope of Work

Summon will deliver the following across all modules:

Area	Deliverables
UI/UX Design	Product discovery and workflow mapping; high-fidelity mockups for all 26 modules; design system with BNI brand guidelines; responsive layouts for desktop, tablet, and mobile.
Frontend Development (Vue.js)	Vue.js 3 application with all 26 module interfaces; real-time dashboard with Socket.IO; CRM with Kanban/table views; 8-step LOS wizard; workflow builder canvas (Vue Flow); AI agent chat interface; omnichannel unified inbox; customer portal; mobile RM workspace.
Backend Development (Python / Frappe)	Frappe-based backend with custom DocTypes and server scripts; REST API with authentication and RBAC; CRM, LOS (Frappe Workflow state machine), workflow engine, credit analysis, document management, communication, collections, portfolio monitoring, reporting (Script Reports), rules engine, committee approval, and all supporting modules.
AI/ML Services	10 specialized AI agents; AI lead scoring and credit memo generation (LLM); OCR for KTP/NPWP/financial documents; AI document classification; customer sentiment analysis; collection prioritization; anomaly detection for portfolio monitoring.
Infrastructure & Security	Frappe bench deployment with Docker/Kubernetes; MariaDB, Elasticsearch, Redis; MinIO object storage; AES-256 encryption at rest and TLS 1.3 in transit; RBAC enforcement; audit logging; automated backup; Prometheus and Grafana monitoring.
Integration	WhatsApp Business API, email (SMTP/API), SMS gateway; OCR service; SLIK/Pefindo and e-KYC (Dukcapil) connectivity readiness; e-signature; payment gateway; SSO/Active Directory; webhook infrastructure.

Out of Scope

To maintain scope clarity and align with stated exclusions:

1. Requirement gathering and business analysis phase (assumed completed prior to development start);
2. User Acceptance Testing (UAT) and QA testing phases (to be scoped separately);
3. Physical hardware procurement (servers, networking equipment, workstations);
4. Core banking system integration or modification;
5. Existing legacy system data migration and ETL processes;
6. SLIK/Pefindo API subscription costs and direct integration (connectivity readiness provided);
7. Dukcapil e-KYC API subscription and fees;
8. WhatsApp Business API subscription fees and Meta business verification;
9. SMS gateway subscription costs;
10. Third-party AI/ML API costs (OpenAI, cloud AI services);
11. SSL certificates, domain registration, and DNS management;
12. Regulatory compliance certification or audit (OJK/BI audit);
13. End-user training program delivery (training materials provided, delivery separate);
14. 24/7 production monitoring and operations staffing;
15. Native mobile app development (iOS/Android) beyond responsive web PWA;
16. Business continuity and disaster recovery site setup;
17. Penetration testing by third-party security firms;
18. Post-development maintenance and support beyond warranty period;

Success Criteria & Deliverables

Deliverable Category	Specific Items	Acceptance Criteria
Design	High-fidelity mockups for all 26 modules, design system documentation, responsive layout specifications.	Approved by BNI project stakeholders prior to development kickoff.
Core Platform	Dashboard, CRM, Customer 360, Lead Management, RBAC, Administration, Audit Trail.	All modules functional with real-time data rendering; dashboard loads in under 3 seconds; RBAC enforced across all endpoints.
Lending Modules	LOS (8-step flow), Credit Analysis, Workflow Engine, Rules Engine, Committee Approval, Product Configuration.	End-to-end loan application flow completable; credit memo auto-generated; workflow builder creates and executes custom flows; committee voting functional.
AI Capabilities	10 AI Agents, AI lead scoring, AI credit memo, OCR extraction, document classification, customer summary.	All 10 AI agents responsive via chat interface; OCR accuracy above 90% for standard Indonesian documents; AI-generated content factually consistent with source data.
Communication & Collections	Omnichannel inbox, notification center, collections dashboard, customer portal.	Messages delivered across all configured channels; aging buckets calculated correctly; customer portal accessible and functional.
Monitoring & Reporting	Portfolio monitoring, covenant tracking, reporting & BI, task & SLA management.	Early warning triggers fire correctly; covenant breach alerts delivered; custom reports generate in under 30 seconds; SLA timers track accurately.
Integration & API	API gateway, webhook hub, integration connectors, partner management.	API documentation published; webhook delivery reliable; OAuth 2.0 flows functional; rate limiting enforced.
Security & Compliance	RBAC, audit trail, encryption, session management.	Zero critical security vulnerabilities at delivery; all user actions logged immutably; data encrypted at rest and in transit.

Detail Features

Feature Category	Specific Feature
Executive Dashboard	SSO/AD/OAuth login with 2FA; 14+ KPI widgets (applications, approval rate, disbursement, portfolio OS, NPL, collections, RM productivity, pipeline, SLA); AI insights panel; portfolio heatmap; risk alerts; pending approvals; global filters; drilldown navigation; role-based widgets; real-time WebSocket updates; PDF/PNG export; dark/light mode; command palette (Cmd+K); AI assistant widget.
CRM & Lead Management	Lead list (table/Kanban); 9-stage pipeline with configurable stages; AI lead scoring (0-100, Hot/Warm/Cold); AI qualification with next-action suggestions; RM auto-assignment (round-robin/weighted/region); lead detail tabs (Overview, Activities, Documents, Notes); opportunity pipeline; contact and company management with hierarchy; relationship graph; activity tracking; AI meeting summaries; follow-up reminders; bulk actions; Excel/CSV import; UTM tracking; conversion funnel; aging reports; mobile capture with OCR; AI conversation coach; custom fields; @mention notes.
Customer 360 Profile	Unified header with quick stats; AI 5-bullet summary; personal/company data with KTP/NPWP validation; shareholder UBO tracking; directors with AML/PEP screening; related entities with group exposure; financing history; active facilities with health indicators; SLIK/Pefindo credit scores; bank accounts; collateral with LTV; document center; communications feed; financial statements with AI extraction; risk profile; transaction history; site visits with GPS; relationship graph; timeline view; AI cross-sell insights; watchlist; customer merge; KYC status.
Loan Origination System (8-Step Flow)	Step 1 - Intake: Dynamic forms, product selection, e-KTP OCR, selfie liveness, KYC/PEP screening, AI doc classification. Step 2 - Documents: Upload center, missing doc tracker, e-signature. Step 3 - Credit: AI spreading, ratio analysis, benchmarking, AI credit memo. Step 4 - Collateral: Registration, appraisal, LTV monitoring, insurance tracking. Step 5 - Approval: Multi-level routing, committee assignment, delegation. Step 6 - Legal: Agreement templates, clause library, digital signing. Step 7 - Disbursement: Account verification, scheduling, multi-tranche. Step 8 - Post: Repayment schedule, payment tracking, restructuring.

Feature Category	Specific Feature
Workflow Engine & Rules Engine	Workflow: Drag-and-drop canvas with node palette (trigger, action, condition, approval, AI agent, webhook, delay, loop); conditional branching; parallel paths; SLA timers; versioning with rollback; template library; execution monitoring; scheduled triggers. Rules: Visual IF-THEN builder; decision tree editor; versioning; simulation mode; criteria types (numeric, text, date, formula); action types (route, assign, calculate, notify); exception handling; performance analytics; batch execution.
Credit Analysis & AI Agents	Credit: AI-assisted extraction from statements; automated spreading; ratio analysis (liquidity, leverage, profitability, efficiency); industry benchmarks; multi-year trends; scenario simulation; peer comparison; AI credit memo generation; scoring integration. AI Agents (10): Credit Analyst, Document Processing, Customer Insight, Collection Strategy, Compliance, RM Assistant, Risk Assessment, Report Generator, Workflow Automation, Data Quality. Shared chat interface with context memory; action execution; workflow integration; usage analytics.
Document Management & Omnichannel	Documents: OCR for KTP/NPWP/financial docs; AI classification; folder structure; version control; expiry tracking; watermarking; permission-based sharing; templates; bulk upload; full-text search; annotations; retention policies. Omnichannel: Unified inbox (WhatsApp, email, SMS, in-app); intelligent routing; template management; AI-suggested replies; bulk messaging; interaction history; agent assignment; SLA tracking; sentiment analysis; canned responses; delivery analytics.
Collections & Portfolio Monitoring	Collections: Aging buckets (current, 1-30, 31-60, 61-90, 90+ DPD); PTP recording; AI-prioritized queues; field visit scheduling with GPS; call logging; payment arrangements; restructuring workflow; legal escalation; performance dashboard; automated reminders. Portfolio: Concentration risk by industry/geography/product; early warning system; watchlist management; covenant breach detection; heatmap; stress testing; migration analysis; vintage analysis; AI alerts; exposure limits.
Reporting, Task & SLA Management	Reporting: Dashboard builder; custom report builder with grouping/filtering; KPI threshold alerts; scheduled generation with email distribution; OJK/BI regulatory templates; ad-hoc queries; Excel/PDF/CSV export; role-based sharing; trend analysis. Task & SLA: Task assignment with priority; SLA timers per workflow stage; multi-level escalation; Kanban/list views; recurring tasks; dependencies; workload balancing; performance metrics; breach analytics.
Administration, RBAC & Compliance	Admin: User/branch/product/workflow/SLA management; email templates; system parameters; branding; backup scheduling; health monitoring. RBAC: 9 standard roles; custom roles; module/action/field-level permissions; branch isolation; approval authority matrix; IP whitelist; session management. Audit: Immutable logging; field-level change tracking; login history; data access logs; forensic search; audit reports; tamper-proof storage.
API, Notification & Partner Management	API: RESTful gateway with versioning; webhooks; OAuth 2.0; API key management; integration marketplace; Swagger docs; rate limiting; usage analytics; sandbox. Notification: Multi-channel (in-app, email, push, SMS, WhatsApp); user preferences; templates; batching/digest; priority routing; delivery tracking; DND scheduling. Partner: Vendor onboarding; SLA tracking; performance scoring; contract management; partner portal.
Product Config, Committee & Covenant	Product: Loan catalog; interest tiers; fee structure; eligibility rules; lifecycle management; comparison matrix; margin config. Committee: Multi-level definition; quorum enforcement; scheduling; weighted voting; decision recording; e-signature; delegation; auto-generated minutes. Covenant: Financial/non-financial definitions; automated testing; breach detection; cure period tracking; waiver workflow; compliance dashboard; amendment workflow.
Customer Portal & Mobile RM	Portal: OTP login; application status tracking; document upload with checklist; payment schedule and history; support tickets; AI chatbot; profile management; facility overview; RM messaging; mobile-responsive. Mobile RM: Lead capture with GPS and OCR; visit logging with photo upload; on-the-go LOS actions; offline mode with sync; route planning; activity dashboard; push notifications; voice-to-text; nearby customer search; expense logging.

Technical Architecture

Component	Technology / Approach
Frontend	Vue.js 3 with Composition API and TypeScript; Tailwind CSS with BNI design system; Pinia for state management; Vue Query for server state; VueDraggable for workflow builder and dashboard widgets; ECharts and D3.js for data visualization; Vue Flow for workflow canvas; PWA with Workbox for offline support.
Backend (Frappe Framework)	Python with Frappe Framework; built-in REST API with automatic endpoint generation from DocTypes; Frappe Realtime (Socket.IO) for real-time dashboard and notification updates; Frappe authentication with session management and OAuth support; Redis-backed caching and rate limiting.
CRM & LOS Services	Frappe DocTypes and server scripts for CRM (lead, opportunity, contact, company), LOS (8-step state machine using Frappe Workflow), Customer 360 (aggregation via Frappe API), collections, and portfolio monitoring.
Workflow Engine	Frappe Workflow for approval flows and state transitions; custom Python controllers for advanced node-based execution; DAG (Directed Acyclic Graph) traversal; Frappe Scheduler for SLA timer management; event-driven hooks via Frappe doc_events.
AI/ML Services	Python modules integrated within Frappe; LangChain/LlamaIndex for AI agent orchestration; OpenAI GPT-4 or equivalent for credit memo generation and chat agents; Tesseract + custom models for OCR; spaCy for NER; scikit-learn for lead scoring and collection prioritization; vector database (Qdrant) for context-aware agent memory.
Document Service	Frappe File Manager with custom DocTypes; MinIO (S3-compatible) for object storage; Apache Tika for text extraction; AI classification pipeline; Frappe versioning for document version control.
Communication Service	Frappe Communication DocType; WhatsApp Business Cloud API integration; Frappe Email Account for email; SMS gateway abstraction; Socket.IO for real-time messaging; Redis Queue (RQ) for delivery reliability.
Notification Service	Frappe Notification system with custom extensions; Firebase Cloud Messaging for push; multi-channel dispatcher; preference engine; batching and digest processor; delivery tracking with retry via RQ.

Component	Technology / Approach
Report Engine	Frappe Report Builder and Script Reports; WeasyPrint for PDF generation; openpyxl for Excel; Jinja2 templating (built into Frappe); scheduled generation via Frappe Scheduler.
Rules Engine	Custom Python-based rules executor within Frappe; JSON-based rule definitions stored as DocTypes; decision tree evaluation; integration with Frappe Workflow for automated triggers.
Database	MariaDB (Frappe default) as primary relational database; Elasticsearch 8 for full-text search across documents, customers, and audit logs; Redis for caching, session management, real-time features, and background job queuing.
Object Storage	MinIO (S3-compatible) for documents, OCR outputs, report files, media attachments, and backup archives.
Infrastructure	Docker containers orchestrated with Kubernetes; NGINX as reverse proxy (Frappe standard); Prometheus + Grafana for monitoring and alerting; Loki for centralized logging; automated backup with Frappe bench backup and scheduled snapshots.
Security	AES-256 encryption at rest; TLS 1.3 in transit; Frappe RBAC with Role Profiles and User Permissions for data-level access control; session management with configurable timeout; audit logging to append-only storage; OWASP Top 10 hardening; optional SSO/LDAP/Active Directory integration via Frappe Social Login.
CI/CD	GitHub Actions or GitLab CI/CD; automated testing (unit, integration) with Frappe test runner; container image builds and vulnerability scanning; staged deployment pipeline (development, staging, production); Frappe bench migrate for database migration management.

Timeline

Target Development Complete: 2 months after requirement gathering completion | Target Go-Live: Upon completion of UAT (scoped separately)

Phase	Duration	Deliverables
Phase 1 – Core Platform & Foundation	Weeks 1–3	Infrastructure setup and CI/CD pipeline; authentication system with SSO/2FA and RBAC enforcement; executive dashboard with KPI widgets and real-time updates; CRM module with lead pipeline, Kanban/table views, and AI lead scoring; Customer 360 unified profile with relationship graph; lead management with omnichannel capture and auto-assignment; administration module and system configuration; audit trail infrastructure; notification center.
Phase 2 – Lending Engine & Business Logic	Weeks 3–6	Loan Origination System (complete 8–step flow from intake to post-disbursement); workflow engine with drag-and-drop builder and AI agent nodes; credit analysis module with financial spreading and AI memo generation; rules engine with decision tree builder; committee approval system with voting and e-signature; product configuration module; document management with OCR and AI classification; AI Agent Center with 10 specialized agents; task and SLA management.
Phase 3 – Extended Modules & Integration	Weeks 6–8	Omnichannel communication (WhatsApp, email, SMS integration); collections management with aging buckets and AI prioritization; portfolio monitoring with early warning and covenant tracking; reporting and BI with custom report builder; API and integration center with documentation portal; partner and vendor management; customer self-service portal; mobile RM workspace; cross-module integration and end-to-end flow validation; performance optimization.

Resource Allocation

Role	Allocation	Responsibilities
Project Manager	Full engagement (Weeks 1–8)	Scope management, sprint planning, client coordination with BNI project office, risk tracking, milestone reporting, cross-team synchronization.
UI/UX Designer (2x)	Weeks 1–6	Module mockups for all 26 modules, BNI brand integration, design system creation, responsive layouts, prototype reviews, design QA.
Frontend Engineer – Vue.js (4x)	Weeks 1–8	Vue.js 3 application development: dashboard widgets, CRM views, Customer 360 profile, LOS wizard, workflow builder canvas (Vue Flow), credit analysis UI, AI agent chat interface, omnichannel inbox, collections dashboard, portfolio views, report builder, customer portal, mobile RM workspace.
Backend Engineer – Python/Frappe (4x)	Weeks 1–8	Frappe DocType design and server scripts, CRM module, LOS state machine via Frappe Workflow, workflow engine controllers, credit analysis module, document management, communication services, collections engine, portfolio monitoring, Frappe Report Builder, notification system, rules engine, administration configuration.
AI/ML Engineer (2x)	Weeks 1–8	10 AI agent development and integration within Frappe, OCR pipeline, document classification model, lead scoring model, credit memo generation, customer summary generation, collection prioritization algorithm, sentiment analysis.
DevOps Engineer	Weeks 1–8	Frappe bench setup, infrastructure provisioning, Kubernetes cluster, CI/CD pipeline, monitoring stack, MariaDB and Redis management, security configuration, deployment automation.

Important Notes

1. This proposal covers the feature development phase only. The 2-month development timeline commences after the completion of requirement gathering and business analysis, which is scoped separately.
2. User Acceptance Testing (UAT), system integration testing (SIT), and performance testing are not included in the 2-month development timeline and should be scoped as a separate phase.
3. The 2-month timeline assumes a full development team working in parallel across all modules with dedicated resources as outlined in the resource allocation section.
4. All relevant data, API credentials, infrastructure access, and technical documentation must be provided by BNI prior to development kickoff.
5. Third-party API subscriptions (WhatsApp Business API, SMS gateway, OCR services, AI/LLM API credits, credit bureau access) must be procured and billed by BNI. Summon will configure and integrate these services.
6. Server infrastructure, cloud hosting, database licenses, and network connectivity are to be provided or procured by BNI.
7. AI model accuracy is dependent on training data quality and volume. BNI is encouraged to provide domain-specific datasets for model fine-tuning, particularly for Indonesian banking document OCR and credit analysis.
8. Integration with BNI core banking system and other internal systems requires API documentation and sandbox access to be provided by BNI. Core banking modification is out of scope.
9. SSO/Active Directory integration requires BNI IT team collaboration for configuration and testing.
10. Documentation (technical docs, API reference, user guides) will be delivered alongside the developed features.
11. Bug fixing warranty: 6 months from the delivery date, covering defects arising from Summon's implementation.
12. This proposal is valid for 30 days from the date of issuance.

Your Fast Paced Development Partner

We can help you for everything from brainstorm to deployment

Rapid Ideation & Vision Alignment

Our team dives deep into understanding your goals, challenges, and opportunities transforming ideas into actionable strategies in record time.

Agile Roadmapping for Success

Once the vision is clear, we craft an agile roadmap tailored to your needs.

Intuitive & Impactful Design

Every pixel is crafted to deliver seamless experiences balancing aesthetics with functionality.

Accelerated Prototyping & Coding

From prototype to production-ready code, our developers work tirelessly to bring your AI solution to life.

Precision Validation at Speed

We rigorously validate every feature using automated testing pipelines, ensuring reliability and scalability before launch.

Seamless Launch & Continuous Support

Your AI solution goes live with zero downtime. But it doesn't stop there—we provide ongoing support and optimization.
